SUMMARY

1. Purpose

Describing steps software development according to Agile method based on the project characteristics of Viettel Peru.

2. Applied object

bitel

Apply for all software development projects at all Departments if have software development activities.

3. Responsibility

- All Departments are responsible for compliance and correct implementation of the steps in the process.
- The Process Department periodically checks the compliance regulations and instructions of all Departments.

6. Brief description

	or margin deposit person	
No	o Step	Detailed description
1.	. Creat new project	PO make new project on REQUIREMENT SYSTEM if RF about new software
2.	Creat Product Backlog	- PO initiates Product Backlog, lists the epic/story lists with priority rating and preliminary estimate effort of Stories. (see Instructions for writing user stories Guide.01)
3.	Estimate effort	- PO cooperates with SM and DT to estimate effort according to instructions Guide.02 . - DT creat Overal Design according to form F.03 and get approve overall design document
.	. Overal Design	- DT creat Overal Design according to form F.03 and get approve overall design document by Head of Department. - DT designed high-level database for the project according to F.04 .
5.	. Make plan	
6.	Prepare development environment and working rules	- DT determines length of Sprint (in agreement with PO, SM) in a time frame of 2-4 weeks Set up internal regulations of DT: daily meeting time, development, testing, work coordination, team interaction
7.		At start of the Sprint: SM held a Sprint Planning meeting to determine 2 contents of What - Story and How - Task with meeting time \leq (weeks in a Sprint * 2 hours).
·∞	. Choose Story will do	- PO, SM, DT define purpose of the Sprint, define completion of Sprint and define completion of each Story - PO performs priority assessment of items (Epic, Story) in Product Backlog.
9	Determine task will perform	- DT discuss and determine estimated effort for Stories, make sure to divide Story with total execution effort <= 1MM .
) /// //	r In Char	- DT focuses on completing Sprint Backlog Stories with software construction activities (Analysis, Design, Programming, Testing) performed concurrently. - At the beginning of each day, DT conducts a Daily Meeting within 15 minutes at the

	N ₀	Term	Explain
			product.
			Agile software development (Agile) is a philosophy that combines software development methodologies based on the principles of iterative and incremental . Accordingly, the needs and solutions are improved through the
	2.	Agile	cooperation of the development team (Autonomous and Cross-functional Teams). Agile often uses adaptive planning, evolutionary development and delivery, and uses short and flexible time frames to easily respond and
		Scrum	As the most popular Agile framework, focusing on how to organize activities and roles of software development projects to ensure that the values and philosophy of the Agile method are realized.
	4.	Product Owner - PO	A defined role in Scrum, the Product Owner (PO) is responsible for maximizing product value, managing product requirements, defines the items in the Product Backlog. PO responsible for the entire process. PO manages product requirements, defines items in the Product Backlog, sets performance goals for each Sprint, and evaluates product results by the Development Team (DT) before acceptance with the customer.
	5.	Development Team – DT	As a defined role in Scrum, the Development Team consists of members directly involved in building the product, each member having at least 1 major expertise and possibly supporting expertise, taking the initiative to work, self-manage the progress and quality of personal work. Directly involved in building software and documentation through analysis, design, programming, and testing activities.
	136	Scrum Master – SM	As a defined role in Scrum, the SM follows the project throughout its implementation, has the role of guiding and ensuring that the ST executes in accordance with Scrum, uncovering problems, and assisting the project team to work effectively Follow up the project team throughout the sprint implementation. Coordinate meetings, observe the project team
Ven Thi	7.	Scrum Team (ST)	to detect problems, assist in solving arising problems, guide and coordinate the work of the project team. Includes Product Owner (PO), Scrum Master (SM) and Development Team (each member has at least 1 main expertise and may have supporting expertise), actively taking jobs, self-managing progress and quality individual workload.
7 \N94j	,œ	QA	Quality Assurance is responsible for monitoring and supporting Support the project in terms of the process, ensuring that the project outputs are evaluated according to the specified quality standards. Monitoring, consulting, supporting the project to follow the right process. Confirm that the project's output

No	Term	Explain
		products are evaluated according to the issued quality standards.
O	Product	List of tasks that the project team needs to do is arranged in order of priority by objects such as: feature requests
	Backlog	(story), bug fixes (bugs), tasks to be done in the project (chore)), big stories (epic), prototypes. Product Backlog is updated throughout the product development lifecycle. Each project has only one Product Backlog.
10.	. Epic	As the basis for making product roadmap and Sprint planning, release plan.
11.	Story (User Story)	A set of features, requirements, or business requirements at a general level.
12.	. Sprint	The work cycle to create increments for the product. Sprint lasts from 1-4 week and is performed continuously without interruption. During the project, the time for Sprint development is fixed. In Viettel Peru: The output of each sprint is a finished product that can be run in a Pre - Product
13.	Sprint Backlog	List of features, customer requirements (story) with priority is done first during the Sprint, updated with the content throughout the implementation.
14.	. Release Plan	Product release plan: is the roadmap for implementing sprints to deliver release to customers.
15.	Burndown Chart	Graph showing the amount of work and time remaining in a Sprint, a release plan (Release), or product. Development Team Speed. Time frame: is the maximum amount of time spent on an activity that follows the Agile process.
16.	. Velocity	Development Team Speed.
17.	Timebox	Time frame: is the maximum amount of time spent on an activity that follows Agile process.
18.	. Major error	Is a data binding error, a business function error of the system, a progress error Programs, web services, information security errors have not caused system crashes.
19.	. Critical Error	It is a professional function error of the system that causes the system to hang, not to be handled Continued, the errors that affect the test cannot be continued
20.	RF	Requirement Form
74ye	Requirement system	System to receive and manage requests for new construction and software upgrade of Bitel
